Real Estate Information System (REALIS)

Internet-based system that gives subscribers access to information on Singapore's real estate market anytime, anywhere

Comprehensive and detailed property data

Wide range of information on the private residential, commercial and industrial* property sectors in Singapore

Timeseries Database

- More than 500 time series
- Statistics include price and rental indices, sales and launches, stock and vacancy, and supply in the pipeline

Transaction Database

- Unit-level sale transaction information including address, type of sale, transacted price, date of sale, tenure, unit size

Rental Database

- Rental information for private residential properties (individual rental without unit address) and commercial properties (up to street-level)

Developers' Sales Database

- Information on launches and sales for private residential and executive condominium projects

Project Database

- Information on commercial and private residential projects in the pipeline and newly completed private residential projects
- Statistics include number of units by construction, completion and sale statuses

Stock Database

- Information on stock and vacancy of private residential (by number of units) and commercial properties (by floor space)

* Sale transaction data for industrial properties is available in REALIS. Other datasets on the industrial property sector are available in JTC's J-Space at <https://stats.jtc.gov.sg>
